

# Kinectro

INNOVATIVE & SMART SOLUTIONS

---

# Hello!

Thank you for considering our IT company for your technology needs. We are a team of dedicated professionals with a passion for using technology to improve the way businesses operate. Whether you need help with software development, network infrastructure, cloud computing, we have the skills and expertise to support you.

**Kinectro**

# About Us

For the last 10 years, Kinectro has been van guarding the craft of development for our clients with our dynamic and veteran team in web solutions, web development, and mobile solutions. We aim to harness and create the best in the world of digital to take our client's business at the pinnacle.

Our IT consultants and business consultants make sure that your experience with our IT consulting agency is worth it. , in other words, the cool tech peeps that can cater to all your technology related needs. You don't have to spend big bucks on hiring an in-house engineering team because we work from step one and help you climb the whole ladder: technology strategy, implementation, testing, deployment, and support.

# OUR SERVICES

From startup to enterprise, We are providing a full range of services your company needs. Whether it's custom software engineering, software testing and quality assurance, mobile app development, team extension, graphic designing, system integration, technology consulting, marketing websites or software support. we got you covered.

## Web Development

Web development refers to the process of creating and maintaining websites or web applications. This includes everything from designing the user interface and user experience to developing the back-end infrastructure that runs the website.

## Offshore Development Center

we provide comprehensive offshore development services tailored to your unique business needs. We will help you set up a team of highly skilled developers who will work exclusively for your organization. Our ODC services enable you to accelerate your product development cycle and optimize costs.

## Mobile Development

Mobile development requires a strong understanding of mobile app design principles, mobile-specific programming languages and frameworks, and the ability to optimize applications for the unique constraints of mobile devices, such as smaller screens and less powerful hardware.

## Blockchain & DeFi Services

With our blockchain and DeFi development services, you can streamline your business operations, reduce costs, and increase transparency and security.

## Quality Assurance & Testing

Effective QA helps to minimize the number of issues in the software, which can lead to improved user satisfaction and a reduction in the cost and time required for errors in the software.

## DevOps

The goal of DevOps is to increase the speed and reliability of software delivery by bringing together teams that have traditionally operated separately and automating the software delivery process.

## UI/UX

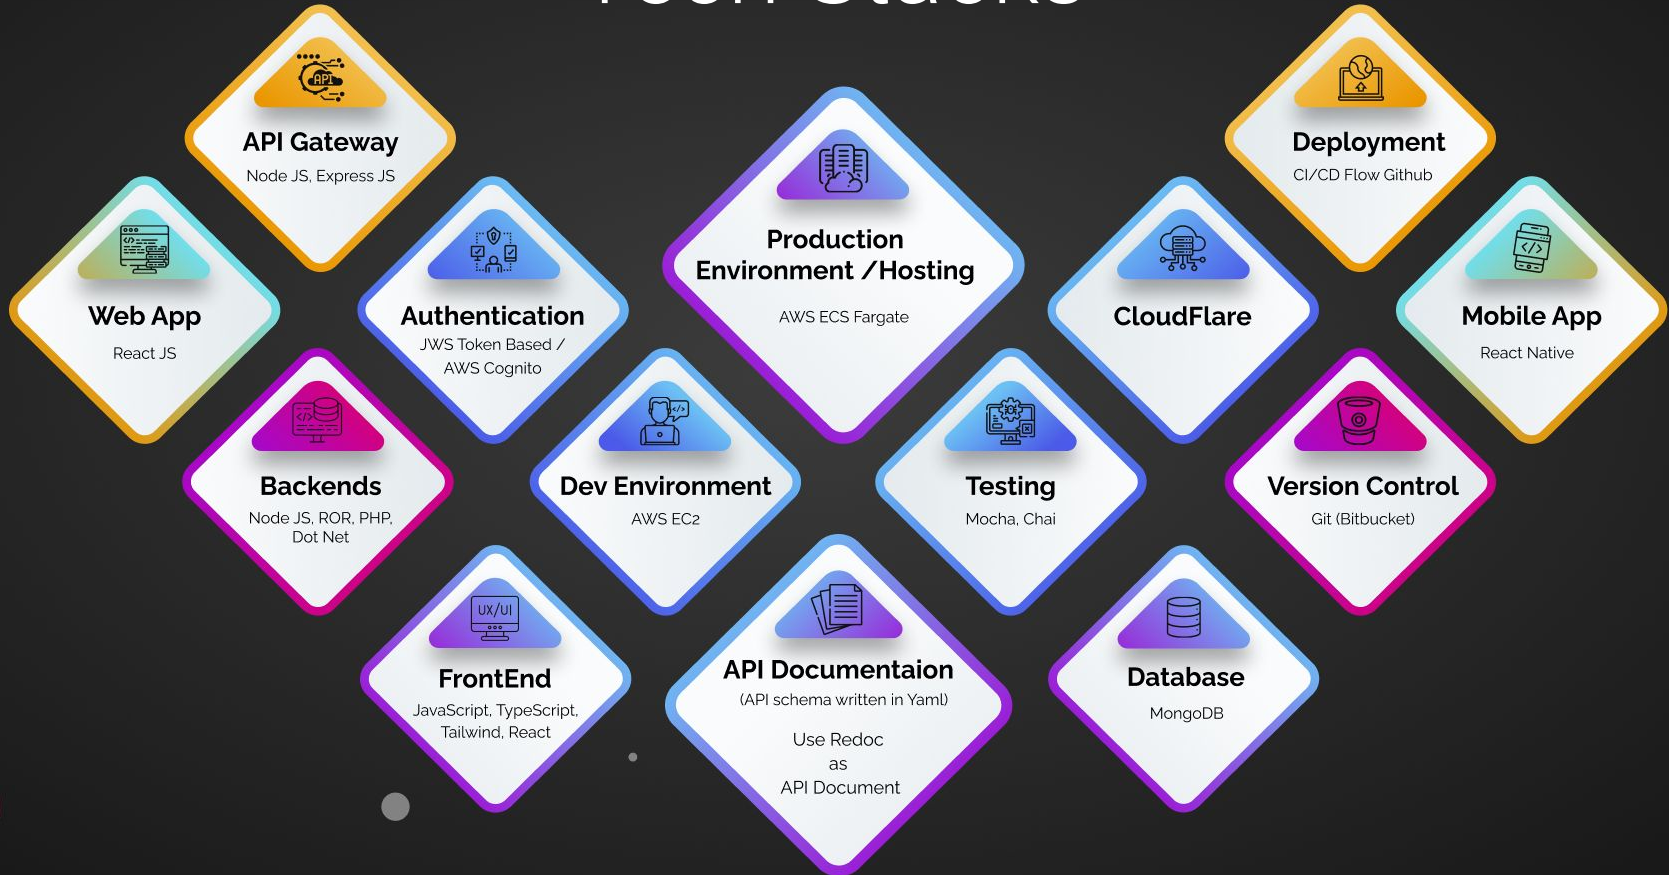

UI/UX design is essential to the success of a digital product, as it can greatly impact the user's experience and their willingness to use the product in the future.

## Designing

A strong understanding of design principles such as color theory, typography, and layout is essential for creating effective and visually appealing designs.

360 AUTOMATION TOOL FOR ECOMMERCE BUSINESS

## Mobile Application

Revolutionize Your E-commerce Business Strategy with Our All-in-One Automation Tool. Whether it's omnichannel retail, multi-courier support, or social media publishing and engagement, our platform integrates all modules into a single automated solution to save you time and cost while increasing sales.

# Why choose us?

Like most coders, we don't isolate ourselves from your business and just focus on the technical aspect of it. We believe that it is important to have a good understanding of your products, services, values, vision and then work accordingly for the development of the product.

Our expert IT Consultant would look into your business and understand your requirements and then we would come up with the best possible design. IT Consultants at Kinectro believe that the designing part is probably the most important part because a lot of brain goes into strategizing a good design. We make sure that our design meets your requirements to the full.

The next step is the implementation of that design and our programmers have all the relevant technical expertise and experience needed for successful implementation.

Now, we don't leave you hanging there – we verify our implemented design to make sure that everything works as expected and that we both are fully satisfied with the deliverables. The job of our IT consulting agency doesn't really end here. We want to be your technology partners and partners don't leave midway. We are there to maintain our deliverables and always be there at your service when needed.

**Kinectro** is also proud to say that we can deploy your product on any infrastructure.

# THANK YOU

Please don't hesitate to reach out to us if you have any questions or if there's anything we can assist you with. We look forward to the opportunity to work with you!
